

HIGH VISIBILITY PARKA

VIPAVL

This garment is designed for professional use in outdoor work, where visibility, weather protection and thermal comfort are essential. As such, it is suitable for activities such as construction, public works, urban maintenance, logistics and industrial environments, especially in adverse weather conditions. The lined and padded interior provides greater comfort during daily use, while the waterproof structure helps protect against rain and moisture. It also includes a front zipper for greater practicality and speed when putting it on. Reflective strips on the front and sleeves increase visibility in hazardous environments and low light conditions. In addition, the hood hidden inside the collar and the pockets with flaps and Velcro allow for functional and continuous use in everyday professional life. This parka also complies with the main European standards applicable to high-visibility clothing and protection against cold and harsh weather.
