

MANUAL TILE CUTTER

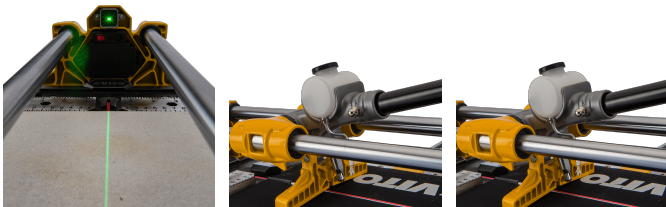

VICCM1200

Available in two models, 800mm and 1200mm, they can be used for any project, depending on the size of the ceramic tiles to be applied. They are equipped with blades that guarantee a precise and uniform cut for more than 30,000 metres of work/cutting. The Ø20mm calibrated guides guarantee precise and consistent cuts, keeping the blade correctly aligned throughout the cut. The solid base and H-shaped ruler provide uniform and stable support during the cut, reducing the margin for error. Easy to configure the blade to different widths of the ceramic, allowing quick and intuitive adjustments between distinct types of cuts. It allows straight repetitive cuts to be made, aided by an adjustable side top that goes from 0° to 45°. It also includes a laser guide system for a controlled cut.

Key features

- > Laser and calibrated guides Ø20mm;
- > Support for 45° cuts;
- > Liquid reservoir;
- > Reinforced aluminium structure;
- > Precise and uniform cutting.
