

CURVED-TINE MANURE FORK

VI1360

Curved fork designed for soil loosening, aeration and preparation tasks, suitable for agriculture, gardening and outdoor maintenance. The curved tine design improves soil penetration, allowing effective lifting and turning of the ground. Made from tempered steel, it provides strong wear resistance and durability for frequent use. It is suitable for vegetable gardens, beds, vineyards and agricultural land, helping improve soil structure and facilitate planting operations. Available in different sizes and tine configurations, it meets various requirements, from lighter duties to more demanding soil conditions.

Key features

- > Tempered steel for durability and wear resistance;
- > Curved tines for improved soil penetration;
- > Suitable for loosening and aerating soil;
- > Ideal for gardens, vineyards and farmland;
- > Available in multiple sizes and configurations.
