

WELDING GLOVE 40CM

VILS40

The welding glove is designed for welding operations and thermal work requiring effective protection against mechanical and thermal hazards. The cowhide leather coating provides high resistance to abrasion and tearing, ensuring durability in demanding industrial environments. The reinforced palm enhances protection in high-contact areas. It offers high resistance to flammability and small molten metal splashes, making it suitable for welding processes. The long cuff protects the forearm, while protected seams improve safety and extend product lifespan. It complies with EN 388:2016+A1:2018, EN 407:2004, EN 420:2003+A1:2009 and EN 12477:2001/A1:2005 standards and is classified as Protection Category II.

Key features

- > Glove designed for welding
- > Cowhide leather coating
- > High resistance to abrasion and tearing
- > Resistant to flammability and molten metal splashes
- > Reinforced palm
- > Long cuff for forearm protection
- > Protected seams
- > EN 388, EN 407 and EN 12477 certified
- > Protection category Cat. II

Specifications

Certification	EN 388:2016, EN 407:2004 e EN 420:2003+A1:2009
Coating	Cowhide leather
Lining	Cotton
Reinforced palm	Yes
Reinforced seams	Yes
Safety Rating	Cat. II
Size	40 cm
